Project Name: No-Hole Pegboard Set

This set consists of a **no-damage pegboard main panel plus 15 independently original storage boxes and brackets**. All parts can be 3D printed with FDM printers. These 15 storage accessories share a unified design style with different functions, and can be freely combined. They are suitable for storing tools, stationery, figure models, electronic components, 3D printing consumables and other hobby & office supplies. The storage accessories clip onto the pegboard by their own structure, **no screws or glue required**. The pegboard panel itself can be mounted onto the wall with screws or glue. This solution makes full use of vertical wall space to organize scattered items for easy access, creating a neat and efficient wall storage system for your workbench.
