Summary

It is a remix of the Fennec from Rocket League, to make it rollable.

Toys & Games > Vehicles

Tags: rocket league movable fennec rocketleague

- The bottom half of the car now comes off and the wheels slot in. The bottom is then screwed
- It is held on by two pegs and a small m3 screw
- The pegs may need to be glued on
- Don't use supports where the screw goes, as it will be hard to remove
- Print the top of the car with the front facing up
- Print the bottom of the car flat on the build plate
- I have used Christiano tires
- Print the wheels (and axel) so that both tires are touching the build plate

This remix is based on
