pin_top_v12.stl has a captive nut. You must pause the print after the captive part has printed and install a M4 nut.

I wanted a plate for my topeak mtx rack that I could bolt custom experiments on but still remove easily. 2020 seemed like a good option for this.

Masajd for the pin/hook section - https://www.printables.com/model/1081842-quicktrack-rail-for-topeak-pannier/files

renschler_175525 for the openscad bottom plate- https://www.printables.com/model/292797-topeak-quicktrack-mtx-rack-wedge-mounted-to-milk-c

This remix is based on
