updated 22. 10. 2026 | published 22. 10. 2026

Summary

Remix of k1-801's cutting jig, adapted for 2020 extrusions with sharp, non-rounded outer corners.

This is a remix of the excellent [2020 Extrusion Cutting \(sanding\) Jig](#) by **k1-801**.

My 2020 profiles have **sharp, square outer edges** instead of the usual rounded corners, so the original jig didn't fit. I modified the profile cutout so these profiles slide in properly. The rest of the design is unchanged and works exactly like the original:

- Slide the jig onto the extrusion and fix it with M3 screws through the side holes (2 on neighbouring sides are enough).
- Use it as a reference plane to sand or grind the cut end flat and perpendicular.

All credit for the original design goes to k1-801. Please go check out and like the original!
