Summary

Idea by my 9yo son, 3D modeled by me! A spooky Mimic candy bowl with teeth & eye. Grab a sweet if you dare!

The Mimic Candy Bowl (Interactive Kinetic & Gravity-Balanced)

From a 9-Year-Old's Imagination to 3D Reality! This unique Halloween candy bowl was born from a fun family collaboration: **my 9-year-old son came up with the creepy concept, and I engineered his vision into a fully functional 3D reality!**

Inspired by classic fantasy Mimics, this isn't just a static bowl — **it's an interactive kinetic design!**

Key Features & Smart Engineering:

- **Gravity-Weighted Rotating Eyeball:** The eyeball features a built-in internal counterweight. No electronics needed: as the bowl changes position, the eye smoothly rotates on its axis to always keep its eerie stare fixed on the viewer!
- **Dual-Position Gravity Balance:** The bowl's center of gravity is intentionally offset, with the front section containing the 4 bottom teeth being heavier. When empty, it stays upright facing forward like a gaping monster maw.
- **Dynamic Transition:** As soon as you fill it with candies, the shifted weight gently lowers it into the flat, standard bowl position.
