Summary

A new remixed upgraded go kart for your dummy 13 to race with!

Here is the new dummy 13 Go Kart Sport for the dummy 13 to drive with! Based off of tuny's original go kart, this remixed go kart has some new details such as front and rear lights, firewall, and the dummy 13 logo that is seen on the dummy's chest!

And the rims are slightly redesigned to have a different look to the original go kart. The tires are the same tread as before, since tuny designed them well. And the steering wheel system is also redesigned with a ball joint connection method for a smoother steer for the dummy.

Any type of PLA will work indefinitely

20% to 40% infill performs great

TPU is awesome for the tires, so it can feel more rubbery

Textured PEI plate (Bambu lab) or any other type of plate to print this on

I called this remix the Go Kart Sport so that it will seem like another model of a go kart line up, like as if it could be seen in a dummy 13 vehicle dealership. And I figured that "Sport" would fit in with the racing style of this go kart.

I kept the logo on the bottom because it looks like a cross and a tombstone, referencing to Christ.

This remix is based on

Dummy 13 Go Kart

by tuny
