A wall-mounted, dragon-head-shaped holder for the PlayStation 5 DualSense controller.

The design consists of **two parts**: the dragon head and a hidden wall mount. Attach the mount to the wall first, then slide the dragon head onto the mount. The head doesn't move when mounted; the controller goes inside and rotates to get locked into place under its own weight.

Supports

The dragon head requires some **supports** inside the mounting cut-out. This area is hidden from view when the head is mounted. The included .3mf file includes paint-on supports.

Mount options

The mount is available in two versions:

- **Single-hole version.** Can be useful if you prefer to use your slicer's modifier to cut custom hole layouts.
- **Nine-hole version.**
 - **Hole diameter:** 5mm,
 - **Hole spacing:** 10mm distance between centres.

Installation tips

I find using a **single screw** combined with a piece of adhesive tape to be sufficient. If you want to adjust the rigidity of the mount, changing the material, increasing the infill percentage, or varying the position of the screw can help.
