Mounting cradle for Btech DMR-6X2 handheld radio, designed to be fitted with RAM-B-348U ball in rear for use with RAM mounts (or compatible.) A 1/4"-20 ~1/2" long bolt or screw is required to hold the RAM ball in place.

This mount should work with both size batteries included with the DMR-6X2. If using the slim battery, the belt clip is optional as the fit is snug. If using the large battery I recommend also using the belt clip, since the fit is a little less snug (the two batteries have different base profiles).

Happy chatting, KN6EDN.
