Does your dog inhale their food in record time? Gulping meals can lead to indigestion, bloating, and other health issues. Instead of buying an entirely new specialty bowl, this drop-in grid insert converts your existing pet bowls into an effective slow feeder.

- **Smart Fit:** Features a slight outer bevel and a lower-edge fillet radius, allowing for a loose drop-in fit that is easy to lift out for daily washing.
- **Scalable Design:** Easily scale the model in your slicer to fit different bowl sizes.

## Dimensions

- **Diameter:** 5.75" with a slight bevel expanding to 5.8554"
- **Height:** 0.375"

- **Wall Thickness:** 0.125"
- **Edge Detail:** 0.0625" radius on lower edge

## Print Settings & Recommendations

- **Orientation:** Print flat on the build plate. Supports are not required.
- **Material:** Food-safe/pet-safe filaments are recommended (e.g., PETG or food-safe PLA sealed properly, though standard PETG works great for durability and cleaning).
- **Infill / Perimeters:** Solid walls/perimeters recommended for durability against enthusiastic eaters.
