Creality K1/K1 SE Enclosure-Compatible Drag Chain Riser

This is a functional remix of the enclosure-compatible drag chain riser and Bowden guide.

I made two primary changes to improve the part's fit and simplify printing and installation:

- **Converted the model into one single body.** The geometry has been combined into a unified solid rather than separate/intersecting bodies.

- **Corrected the spacing between the mounting screw and power cable.** The distance in this area was adjusted to better match the actual printer geometry and provide the proper clearance for the power cable.

The goal was to retain the functionality and enclosure compatibility of the original design while correcting the mounting/cable relationship and making the model a cleaner single-body part.

Compatibility

Designed around the Creality K1 platform and enclosure-compatible drag-chain setup.

Credit

This model is a remix of the Creality K1 enclosure-compatible drag chain riser & Bowden guide by Gear & Solder. Thanks to the original designer for providing the design this remix is based on.
