GameSir X5S Extender – Up to 260mm

This is a modified version of the original **GameSir X5 Lite Extender**, redesigned to fit the **GameSir X5S** telescopic controller.

The GameSir X5S normally supports devices up to approximately **213mm** in length. With this modification, the maximum extension can be increased to approximately **260mm**, making it possible to use larger tablets.

What's Different in This Remix?

The original model was designed specifically for the X5 Lite. While the X5S uses a similar sliding mechanism, the original extender does not fit properly without modifications.

To improve compatibility with the X5S, I've made the following changes:

- **Hollowed-out design:** Modified the internal structure to accommodate the X5S sliding mechanism.
- **Adjusted dimensions:** Slightly rescaled the original model for improved compatibility.
- **X5S compatibility:** Adapted the extender specifically for the GameSir X5S.

The goal was to make the original design usable with the X5S while preserving its functionality.

Installation Instructions

The installation process is identical to the original X5 Lite extender.

Please refer to the original model's description for detailed disassembly and installation instructions.

Original model:
https://makerworld.com/tr/models/1721286-gamesir-x5-lite-extender#profileId-1827083

⚠ **Important:**

- Installation requires disassembling and physically modifying the controller.
- Some original plastic components must be removed.
- The extender must be secured using adhesive.
- Do not extend the controller beyond approximately **260mm**, as the internal ribbon cable may be damaged.
- Be careful when handling the ribbon cable and springs during installation.

⚠ Disclaimer

This modification is performed entirely at your own risk.

Disassembling or modifying your controller may void its warranty or cause permanent damage. I am not responsible for any damage resulting from installation or use.

❤ Credits

All credit for the original extender design and installation method goes to the original creator.

This is simply a community remix adapted for the **GameSir X5S**.

Huge thanks to the original designer for making the project available!
