Summary

I made this knob to adjust the fan speed of a Yanmar Vio50 Universal excavator, the knob fits perfectly.

Tags: [knob](#) [excavator](#) [fanspeed](#) [dshaft](#) [yanmar](#)

Printed in PETG because it can get warm in a cabine. Used 40% infill. Wall loops on 5.

Printed with a Qidi Q2. Perfect fit on the D-shaft and it was even very difficult to remove it, very tight fit.

Diameter: 24mm

Height of the D-shaft hole: 8,5mm

Height of the hole under the D-shaft: 8,5mm
