Summary

Quickly and securely attach objects to molle webbing

[Sports & Outdoor](#) > [Outdoor Sports](#)

Print using your favorite rugged material and then incorporate 3mm (or 1/8") shock cord into the clip and handle. Pick your favorite bead or knot to tie it off. Its meant to be adjustable, but favors staying in place for a strong capture (if desired). It also fits in two adjacent webbing areas to keep the footprint down.

The hook was designed to fit around the latch when going in vertically, but not horizontally. This is a feature and may seem frustrating at first, but this is to make the attachment more secure from accidental unlatching. Once you get the hang of it, you can quickly detach the hook with one hand in a pinching motion.

If you print this with low cooling, goopy filament such as PETG, PC, PA, etc then you might want supports for just the latch portion.
