### Summary

This is an adapter for machines with 4" (102mm) dust ports too large to easily accommodate friction fit hose fittings.

Some of my shop equipment is equipped with 4" metal fittings for dust collection. I mostly use temporary slip fit connections for my 4" dust collection hose. The machines with the 4" ducts wouldn't fit the temporary slip fit connectors so I made this. It slides onto my machines with a little bit of clearance and can be held in place with a single small screw. The slip fit connector that I have permanently attached to my hose then slides on and off easily but has enough surface area and friction to stay in place during use.
