updated 28. 10. 2026 | published 28. 10. 2026

Summary

I created this to simply solve the issue of the cable chain drooping, I specifically wanted a simple OEM-like solve.

K1 Max Cable Chain Link (15° Angled Tunnel)

This is a modified cable chain link for the Creality K1 Max. The pivot tunnel is tilted 15° inward around its mid-height, which changes how the chain sits and routes. Would advise to use this with a lid riser for clearance.

Features

- 15° angled pivot tunnel with a Ø7.5 mm socket and spigot and a Ø4.25 mm through hole
- Ø3.2 mm link pins top and bottom, with a 23.8 mm pitch
- Built-in stop notch to limit articulation
- Flat base so it prints with minimal supports
- Size: 32.0 x 19.9 x 21.3 mm
