Tags: dart nerf picatinny nerfmod repeater halfdart railmounted repeaterpro

Should be printed with 4- 6 wall layers, requires a bit of force to attach to the gun.
Should be pre-oriented to the direction it should be printed, supports are not necessary, but recommended.
With how the dart holder is designed, the tolerances of the foam should allow for the user to directly pick up and place darts anywhere on the rail, without having to slide them.
No hardware is used for assembly or attachment.
