Summary

A picatinny rail that replaces the old rear iron sight so you can use any of your favorite optics!

This part replaces the old rear iron sight with a picatinny rail for you to attach your favorite optic! To install, you must take apart the blaster (be careful with alignment), remove the old sight, install the new sight, and close up the shell. There is some resistance, which I intended for a more secure part and to prevent it from moving. The rail has a 1° angle to adjust for any slight bending in the part from the blaster. I find it more comfortable having the optic closer to my eye then all the way up front, which is why I made this adapter and so far, it's hitting targets with laser precision!

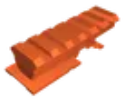

DISCLAMER:

If you start to have heavy trigger problems, I'd recommend either

- Removing safety
- Remove lever lock
- Replace trigger spring with the lever lock spring
- Take the shell apart and try resealing it again with all screws in the blaster

Happy Modding!
