Summary

A holder for the Rode NT1 microphone, designed to attach it to microphone arms and stands.

Gadgets > Audio

Designed for NT1, but may also work for other Rode large diaphragm condencers: NT1-A, 5th gen, NT1000 etc. The 3/8"-16 thread should fit most microphone arms and stands.

Support is included in the model (0.12mm gap). Should be easy to remove with pliers. If it fuses too tightly to the nut, you can remove it in the slicer (split to parts), and use slicer supports instead.

Use 4+ walls, 0.12 layer height. The mic thread is very fine, should be printed at higer detail to work properly. Also, concentric patterns on top and bottom surfaces look pretty cool here
