This is an ultra-low-profile Gridfinity bin for the HOTO electric screwdriver. It's pushing on multiple limits of the Gridfinity standard but it fits, and it works. Technically speaking the bin extends a fraction of a millimeter on the top and bottom but it's so little I can't imagine it being a true problem, and it's 5x3 instead of 6x3 this way. It also takes only about **42** grams of filament this way.

The lid goes in (one way only!) face-up first, then the bin the screwdriver comes in. I've attached pictures to clarify this. The text on the lid needs to be face-up when looked at from the right side for the bin to fit correctly.
