Tags: fruit garden apple gardening fruitpicker applepicker harvest

This fruit picker is designed to thread onto most wooden handles found in North America with an ACME thread, standard on most mops, brooms, paint rollers, etc. A bag is tied to the bottom to catch the fruit.

The picker was designed around the size of fruit my trees produce which are on the smaller size, so check the dimensions if you plan on using it for extra large fruits.

I prefer using extendable paint roller handles.
