The Grayline Technology remote is a Yaesu FH2 remote clone that comes at the fraction of the cost and can be inexpensively obtained on eBay or Aliexpress for under $20.

The construction is simple and I wanted to create something to go in between the boards to protect the circuit boards. This is my attempt at this.

Fun fact: this is actually what inspired the mechanical design of the CFT1 Transceiver I created!

This model was made in SolidCraft 0.30.1, which is currently under development.
