Ergonomic pill shaped shift knob! This one has been a hit with everyone I've handed it to.

A couple of different variants here. The smallest is 40 mm in diameter; the larger ones are 50mm (52.5 with the ribs).

Better looking version of the TH8S adapter included. I have some personal aesthetic issues with the original.

Check my other designs for adapters to fit your car! (**COMING SOON**)

Printable with or without exterior support (support inside the threads is recommended)

Made for the TH8S design contest
