updated 3. 11. 2026 | published 3. 11. 2026

Summary

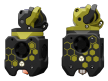

I remixed the A4T to fit the Rapido X. It mounts all the same, with the Rapido mounted rotated 45 degrees.

Remixed the A4T Rapido UHF to fit the Rapido X.
4010 and 4015 fan compatible (like the A4Tv2), both Orbiter and Sherpa/G2 compatible. The Rapido sits rotated 45 degrees so the wires come out one of the rear corners. Printed and installed with perfect nozzle offset and clearance.

This remix is based on

GitHub - Armchair-Heavy-Industries/A4T: [A]nother [4]010 [T]oolhead. A toolhead for Voron front rail printers built around 4010 blower fans, efficient ducts, and easy assembly.
