Summary

The missing back panel for the CM3588 10" rack case.

Gadgets > Computers

What is this?

I couldn't find a back panel for the original model, so I modelled this one up to fit it. I also added a hole so I could put a 12v dc barrel jack on the rear of the case, instead of running power to the front.

Additional Parts:

Connector for the power jack: https://www.amazon.com/dp/B0CN91ZL2P

12v barrel Jack pigtails: https://www.amazon.com/dp/B0D9B7WR23

NOTE: Please double check the polarity of the connector on the board, and that from the pigtail!
