My HP Photosmart M737 camera's battery door broke so I designed a 3D-printable replacement.

Recommended Print Settings:

- ASA or heat resistant material
- 0.1mm Layer Height
- 4 walls
- 100% Infill

- No Supports

Installation Instructions:

1. Bend up the middle metal tabs so the original battery door can slide off
2. Slide off the original battery door. You may have to give it a firm tug.
3. Slide on the 3D printed replacement door!
