print this model twice and glue them together. You may want to sand the area before that, depending on how much material you sand away the fit gets tighter. Then you have a cover for your poker 2 mechanical keyboard which protects your keys and switches, when you are carrying it with you, or in dusty areas.

Print Settings

Printer brand:

Anycubic

Printer:

Kossel

Supports:

No

Notes:

I highly recommend to not use support, since with my first try with support the support was not strong enough in the middle areas.

So I recommend to print it so the main area is lying flat down on the printbed. Oriented as such it should not need support.
