Summary

This is a modification of the original for my Denver Odin with a shorter 24mm screw distance

[Gadgets](#) > [Other Gadgets](#)

Tags: [electricscooter](#) [hook](#) [scooter](#)

This model supports an enlarged screwhead of 10mm and a screw distance of 24mm. I just enlarged the screw holes laterally so it should also fit the original distance of 24.6mm should this in fact be the right one on your scooter. One could call this an “universal” hook. :D

Update: I bought a commercial Hook (sadly the colour is off so I won't use it) but its screw distance is exactly 24mm. That means 24mm is almost certainly the right distance for all the m365 variants and clones.
