Summary

Replacement end of Extel Automated Gate S AT V2N. It is a direct fit, you need to just swap it.

Replacement end of Extel Automated Gate S AT V2N. It is a direct fit. My original piece broke, so I had to make a new one. I made it more robust than the original.

I recommend printing it with the top (the part with fillet sides) on the bed with supports. Also, you should increase the infill to above 50% to make it strong.

If you have any questions, message me or leave a comment. If you like the model, please leave feedback.
