This USB cable clip was designed so that a braided USB cable can slide easily into the slot to keep the cable untangled and nicely organized. The clip was designed to slide onto a portable device charger.

This way it is a nicely organized grab-and-go solution where your cable and charger are neatly together. No more searching for your USB cable or dealing with a tangled mess.

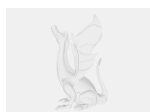

This prints super nicely at a 0.2mm layer height and the go to 0.4mm nozzle. This one is printed in PETG, however, PLA would work also.

The step and 3MF files are included so that you can more easily tweak the clip dimensions to fit your own charger, phone, device, and also modify the slot to properly fit the diameter of your particular USB cable.
