## Summary

A clip can easily insert aluminum profiles.

This is my first model in printables!

Sometimes when you want to attach stuff to the aluminum profile, you must disassemble the whole structure. It's really miserable :(

Now we have this, just 4 parts can be easily printed without support, just download and follow the diagram pictures and try. You can also use your own parts to replace the "Clip\_holder" part.

Available for "4040" and "2020" aluminum profiles. If you find it loose when fixing it into the profile, scale it a little larger in the slicer software. 0.1 layer height and more than 50% infill are recommended for better quality.

Welcome to upload your specific holder parts in remixes. Enjoy!

See my other designs at:

<https://www.thingiverse.com/wuguigui/designs>

I will upload models both in Printables and Thingiverse in the future.
