I use my aircon unit daily in summer, but the problem is that I have to open the window a lot to be able to put the exhaust tube outside. To solve that, I made this adapter that smoothly transforms the round tube into a small rectangle fits through a smaller opening. The plate that designed is the same width as the adapter, so that you can print a few of them and close up the rest of the window.

Edit: I made a better version, maybe check that one out first:
