Just a small fridge magnet.

The magnets need to be inserted during the print. For this, add a pause command (M601 in Marlin and M226 in RepRap) at the height of 2.6mm. If you don't have a magnetic bed, you need to glue the magnets with superglue into place, otherwise the magnets will be attracted by the steel casing of the heater cartridge.

Needs 2pcs. 8x2mm round magnets

Enjoy printing.
