The narrow Elfa Utility box is kind of a staple in my implementation of the board. However, I wanted to be able to divide the space better to handle different items in groups.

I'd originally designed [this](#), which worked okay, but wasn't exactly what I wanted. So I went all in on this design to come up with something that created more rigid dividers.

I've designed two different versions of this same thing. The dual divider, and a single divider version.

## Tips

1. Sliced file for reference only (PETG, .4mm nozzle).
2. Print top-up and you won't need any supports.
3. The bin overlays the top more than snapping on, however it's held on nicely once it's attached to the pegboard.
