I wanted to eliminate an audible hum I was hearing from a couple of my P12s, so I designed this 2mm dampener. You could use these with any 120mm fan, of course, but the corners are cut to match the P12 series specifically.

There are 2 files: one with pegs for use in retention-bracket style tower coolers or the like, and one with holes to allow traditional mounting methods.

Print in TPU or other flexible filament, obviously.

Edit: I added P14 versions as well, for people who want to dampen 140mm fans

## Print Settings

### Rafts:

No

### Supports:

No

### Resolution:

200

### Infill:

100

**Filament:** PolyMaker TPU Black

Category: Computer
