Full cooling assembly for E3Dv6 hot ends.

Heat break clamp takes a 30mm fan, parts cooling is done using 2x5015 blowers.

I use it with a Precision Piezo Orion probe so there are no mounts for BLTouch, induction or other kinds of probes. I might add that in a future update if there's demand for it.

This is a work in progress. Please let me know if you decide to try it out.

I will post individual STLs for each part later on, along with pictures.
