Summary

I love the Raaco storage boxes and use them for all my electronics gear. They're great to travel with and very flexible,

Instructions

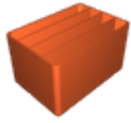

I'll add some more versions (and better images) of this later as I fill up my cases and see what my need will be, but you can always grab the Rhino . 3dm file and modify it yourself :)

Update: turns out 3 compartments only work well for those that have 10-20% tolerance resistor kits. I have some 5% as well, so I made some 4 compartment variations as well. I've also added a HTML file that has tables for the most common resistor values. I've used these to print out labels.

The boxes in the sample images are printed with @Colorfabb XT material. Transparent, strong and easy to work with.
