### Summary

Earned when you tune you print to span filament across a gap that you feel comfortable bragging about.

Tags: [trophy](#) [3dprinting](#) [3dprint](#) [bridging](#) [bridgingtest](#)

Another in my series for makers to earn achievements for their dedication to 3D printing.

Model prints with no supports and with 10% infill. Optional panels are included if you want to print brown/wood covers for the model base.

This trophy is earned when you tune you print to span filament across a gap that you feel comfortable bragging about. You upgraded your fans or tuned the temperature settings, flow rate and movement speed just right.

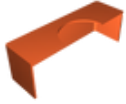

Special thanks to [Roach](#) for the suggestion to make the trophy hexagonal since bridging across a curve of the trophy wasn't happening.
