I wanted to test a simple direct drive upgrade to my Ender 3 v2 without the need to disassemble my x-carriage. Madau3D model at <https://www.thingiverse.com/thing:3589452> seemed about right, I just made a simple change to make it snap on the rollers. It worked nicely and was pretty stable.

I've made a Satsana fan duct remix to fit with this one - <https://www.printables.com/pl/model/206776-satsana-ender-3-v2-4010-fan-duct-with-bltouch-for->

Printed in PETG, 0.2 layer height, 20% cubic infill
