Simple key ring made of filament remnants.

Print from the rest of the filament that you have left, you need about 0.5 m of filament for one key ring. You can use two colors of the filament, just like me.

Dimensions of keyring: 45x15x2.3mm

Print settings: 0.10mm detail

Filament: PLA

Infill: 15%

The gcode files have a filament change added before the text is printed

This is just an example of how to use up filament scraps.
