Summary

A heart-shaped stethoscope holder for doctors and nurses

One day at work I met an anesthesiologist who had a nifty stethoscope holder and thought I should get one for myself. So, once home, I downloaded a few different designs, printed them and tried them out.

Some stethoscope holders had clips which just didn't properly grab the thin scrubs we have at work, others weren't durable enough, and then there were those which didn't fit my stethoscope.

So, I made a few designs of my own.

I prefer a stethoscope holder which can also hold a pencil light and a pen, but since some will prefer a simpler stethoscope holder, I've also included a version which will only hold a stethoscope.

It fits my fairly standard sized Littmann Classic III stethoscope and my large Omron Sprague Rappaport model, but obviously I have not tested them with all available stethoscopes.

This heart-shaped stethoscope is a tad more difficult to use than my general purpose stethoscope holder (found here: <https://www.printables.com/model/169349>), does not grip the binaurals as tightly and is less suited for heavy stethoscopes.

You can find a clip for my stethoscope holders here:

<https://www.printables.com/model/207064>
