This is a very simple remix of **Franco's** very elegant design of a wall socket mount for the Google Nest Mini 2nd generation.

Instead of securing the cable with a separate back plate, I added three little “hooks” to retain the cable instead. For me this solution has worked well.

The hook opposite to the holder for the power plug is slightly shorter, to allow the Google Nest Mini to pass it during insertion. Put in the speaker sideways, and then rotate it in past the shorter hook.

Let me know if you like it! :-)

Update: added a slight chamfer to the rear hooks to provide more clearance for insertion.
