Prototype plant holder, for above surface plants in an aquarium.

I use wooden sticks to keep the plants in place until the roots have grown through the holes.

Might need drill holes through the holder handle and put in plastic screws to clamp it to the aquarium edge, if you are trying to hang a large plant. Will properly be part of a future revision.

Shorter version added.

A word of warning: Avoid filling your tank to the edge with this installed as it can cause capillary action, if it sits flush to the back, and cause a drain of water out of your tank. Speaking from bitter experience.
