This is a fairly simple lid for the baskets to the game Hi Ho Cherry-O! They snap into the baskets with an overhang which can be used to pop them off. It was designed in Fusion 360.

They are made to print easily with the top surface down on the plate.

This is not intended to create a very solid seal to the container, but the aim is to put a lid on the individual containers to make setup and breakdown a little quicker, and not worry about losing the fruits in the box or having them spill out of the box since they just rattle around loose. When putting away the game, you can simply put green in green, red in red, etc... where they should stay until the next time you play.

If they prove to be ineffective, I will refine the design. I didn't use parametric design because I changed the overall design a couple of times making parameters not make sense anymore. If I refine further within the current design, I will parameterize.

Feel free to [Buy Me a Coffee](#) if you like what I've done.
