Summary

I needed something to hold down my various filters and flow regulators for my raised bed drip irrigation.

Tags: [garden](#) [clamps](#) [tubing](#) [raisedbed](#)

I needed something to stabilize the connectors coming out of my drip to hose connection.

These are sized for my Drip-depot things and to screw into the side of my raised bed walls, but I've included the source if you need to modify.

Needs no supports, I recommend PETG for outdoor use, but PLA will last several years. Because they are screwed in, they are easy to remove if you have components that you take inside in the winter. Part of my [drip irrigation collection](#)
