Summary

Simple project for labeling cables, for example - under your desk. Filament needed for one label: <2m (1,75)

[Gadgets](#) > [Computers](#)

Tags: [cable](#) [label](#) [pictogram](#)

For one label, you will need <2m of 1,75 filament. You can also change color during printing, to achieve different color for pictogram.

I prepared labels for electronic devices, which can be usefull right now, when almost every device can be connected via USB-C. Label works perfectry for most of USB cables.

If you have idea for more pictograms, write your suggestions in the comments :D
