An “as small as possible” enclosure for the Shelly line of products. All holes are 2,5 mm and are all the way through so they can be used to attach the enclosure to something as well as keeping the lid in place.

This is a slight update since V1.0 was designed using the Shelly Dimmer 2 as a model, but I notice some (notably newer) devices are slightly thicker. So this version 1.1 should comfortably house even these devices. Would you like a 2mm slimmer enclosure for the Dimmer2 or RGB you can go for the V1.0 here <https://www.printables.com/model/205245>

Posting the Fusion 360 file as well so you can use this and make new and better things from. Please share if you do.
