Summary

So, thank you to Scottdee for the original parts that he posted. These parts were too low resolution for my taste.

So, thank you to Scottdee for the original parts that he posted. These parts were too low resolution for my taste and looked blocky when printing them. I used Scott's specs, but totally re-built the main body and thrusters from scratch. I also re-designed the landing gear in high resolution. I modified the landing gear to slide into place once printed, I created a pin to go in the landing gear to hold the two pieces together. Finally, I made a version of the body that is split in two for smaller printers. I also, from the ground up, designed a set of stickers for the ship. I will post an image of them. Finally, I made a version of the canopy that is split in two because there is just no good angle to print that thing as is!

NOTE: There is one rear wing included. You will need to mirror this wing in your slicer to reflect the opposite wing for this model.
