When making a Boring Company style (not a) flame thrower, I needed to adapt the left-hand threads of the wand to a Burnz-o-Matic extension hose to use blue cylinders.

I tested for leaks using soapy water, and it was leaking all over, so if you use this, you need to get a metal print or maybe a Nylon SLS print, and use Teflon tape, and still check for leaks! Simply do not use if you see any leaks with soapy water. Use at own risk.
