I challenged my 11-year-old son to model a brick. Then I decided to model one as a printer test for my Anycube Photon. If you can make these clutch together with Legos, then you have a well-calibrated printer. Use the horizontal size compensation feature that some slicers have.

Mine was printed in Blu - High Resolution Yet Durable 3D Printing Resin by Siraya (1kg) at 12s exposures and 50u layers.

Category: 3D Printing Tests
