Summary

A cover to block the bright light from an FM transmitter I bought on Amazon.

Bought **THIS** FM transmitter for my car on Amazon. Only problem was that the blue light from it was too bright at night, so I made this cover for it. You can turn off the ring light, but I still found the light from the numbers in the center to be too bright. If you put the cover on and turn the ring light off then it blocks practically all of the light from it. The fit is tight enough for the cover to stay on really well, but won't fall off. It may work on similar models on Amazon but you may need to adjust the size variable in Onshape.

Designed in Onshape.
